

CareConnection®

Could an auditor find this floating around your building?

If you answered yes, then your building is at risk for fines, corrective action plans and a series of headaches.

You've heard of HIPAA and you've been warned about the high cost of a breach of Protected Health Information (PHI). It has become a constant juggling act between the security of written patient information and the increasing impossibility of protecting that information in a skilled nursing building.

Insurance provider, Beazley Associates, analyzed more than 1500 data breaches (Beazley 2014) and found the two most common sources of HIPAA breaches were:

1. Unintended disclosure, such as misdirected emails and faxes (31%)

2. Misplacement and/or Loss of paper records (24%)

ABC Nursing and Rehab
VITAL SIGNS

1. Make sure the resident is relaxed when taking vital signs.

Note: < means "less than" and > means "greater than"

There is a solution! CareConnection®

CareConnection addresses the top 4 ways to avoid breaches with the first FDA cleared, HIPAA compliant vital signs integration system for the LTPAC market. Vital signs are retrieved from your medical devices and charted directly into the patient record in your clinical system – with a secure audit trail that fits seamlessly into your busy workflow.

CareConnection's vitals integration is designed by providers, for providers, documenting clinical measurements to ensure accuracy, security and timely data transfer.

- Automated, secure electronic transfer of vitals documentation from point of care with full accountability trail.
- Threshold breach notifications alert staff based on the parameters your clinicians have set.
- CareConnection's eCareReports send accountability and trending information directly to your management team's inbox to assist in identifying resident trends and caregiver training needs.
