

CareConnection®

WANT BETTER OUTCOMES?

Start with better input.

CareConnection®

Wireless delivery of vitals and weights from bedside to EMR plus SMART* predictive analytics that prevent readmissions.

Put CareConnection to work in your organization to:

- ✓ Prevent readmissions with SMART*Reports
- ✓ Improve care for higher-acuity residents
- ✓ Measure up to the standard of care required by your referral partners
- ✓ Increase clinical accuracy
- ✓ Free up valuable nursing time
- ✓ Eliminate data entry errors

Connecting Your Care

“If it isn’t charted, it isn’t done.”

Caregivers make rounds, collect vitals and weights, and manually record measurements on paper — but then struggle to find the time to get to a kiosk, desktop or tablet to key in that data. What are the results? Documentation errors, omissions, data transpositions and delays that compromise the quality of resident care and the efficient use of precious caregiver time.

A better way — paperless documentation at point of care

CareConnection, the premier solution designed for the long term care industry, fits seamlessly into your workflow, reducing the time and steps required to get information into resident charts and eliminating charting errors. Immediate access to clinical data and instant alerts prompt your clinical team to intervene more quickly — improving outcomes and reducing hospital readmissions.

More importantly, CareConnection’s SMART*Technology delivers powerful tools to prevent readmission by scrubbing the daily vitals measurements to ferret out those subtle markers which are early indicators of resident health deterioration. The daily SMART*Report sent to your DONs and APRNs email gives your team the tools to triage and intervene with care changes that interrupt the “readmission cycle.”

How does CareConnection® work?

The workflow is as simple as 1-2-3:

- 1 - Caregivers take vitals using rugged Vitals CareCarts and weights using Connected Scales. Temporal, tympanic and oral thermometry options.
- 2 - Caregivers review measurements on an easy-to-use CareHub touchscreen tablet. One touch sends the data (linked to caregiver ID, resident ID and time/date stamped) to your electronic health record system (EHR) via CareConnection’s web-based software.
- 3 - Clinical professionals receive alerts if vitals or weights breach the thresholds you’ve defined.
- 4 - CareConnection’s SMART*Technology helps your team prevent readmissions by delivering daily reports via email to DONs and/or NPs alerting them to the subtle changes in condition which are harbingers of resident health crisis.
- 5 - Caregivers and Nurses can use the VitalsCareCart as a mobile kiosk to access the EHR for ADL documentation or nursing notes on the CareHub touchscreen tablet.

Comprehensive care

Our experienced team understands the unique challenges faced by skilled nursing facilities lacking biomed departments and the resources to manage technical issues. We deliver comprehensive support with one call for your medical devices and CareConnection software.

Find out how your organization can get started now!

Time is money — don’t keep throwing it away on slow, manual vitals and weights processes that risk error-prone results and documentation. Put CareConnection to work for your organization! Contact us to find out if your EMR vendor is on our growing list of partners. Visit our website, call us or email at info@constantcaretechnology.com.
