

Vital Signs Integration Solution

This add-on software for your vital signs cart provides caregivers with real time results, allowing them to respond quickly to patients who are showing a decline in health.

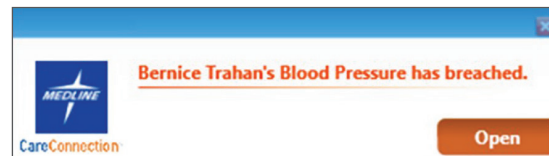

Instant Alerts

- Appears at bedside immediately upon vitals capture
- Indicates vital(s) have breached a set threshold
- Caregivers are able to react instantly with new vitals set, medication administration, or care plan

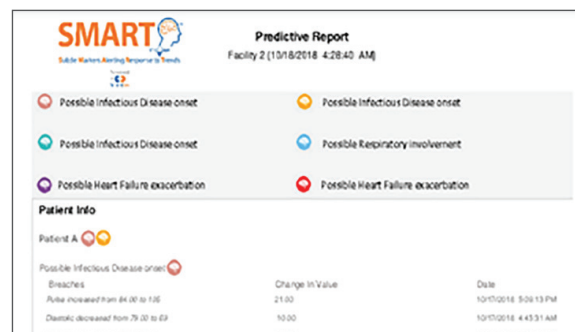

Notification Pop-ups

- App installed on clinical staff computers
- Instant notification if out-of-range vitals have been saved to the resident's EMR
- Notification provides caregivers immediate access to resident's vitals history, trends, notes, and details without having to pull reports or research

SMART* Report (predictive analytics)

- The system scrubs vitals data daily, uses comparisons, and considers minor, subtle changes in condition to point out residents with potential health crises
- Most commonly used as an alert for early indicators of conditions such as sepsis or pneumonia
